

- /etc/system
- /etc/default/login
- /.rhosts
- /etc/snmp
- /etc/mail
- look at /etc/directory for modifications since installation time
- /etc/security/audit_control – COE stomps on it with /securty
- /etc/security/audit_user
- all etc files specified in CSE SCOM (verify against list in SCOM)
 - passwd
 - group
 - hosts
 - ethers
 - locale
 - bootparams
 - services
 - rpc
 - defaultrouter
 - netmasks
- /etc/resolv.conf
- sendmail.cf
- /etc/smb.conf
- /etc/inetd.conf – overwritten by DIE COE – would need to have path substitutions done
- Jumpstart Directories
 - /install/^os`
- tftpboot directory (/tftp)

- /etc/nsswitch.conf
- /etc/nodename
- /etc/domainname
- /etc/rc2.d
- /etc/auto_home, /etc/auto_direct, /etc/auto_master
/etc/auto_*
- cron jobs, at jobs, scripts associated with cron jobs
- substitutions on vfstab, dfstab (/opt/cse -> /h/AFDI)
- logindevperm
- site specific files in /etc/dt

Need a way to be able to specify which local files are restored (command line switch, data file, etc)

Write segments to Disk (makeInstall switch for generating disk files), with to /directory/machinename

Make sure that users know that the transition file will not be deleted and that the segment will not be deleted

Action

Put together notes on how these items would be transitioned and solicit feedback from the AFDI CDR attendees
